

Bipolar Electrotherapy (Diathermy, BICAP and coagulation) for Hemorrhoid

With half of the Americans age 60 and above suffering from hemorrhoid, there isn't any wonder why lots of companies invest for the research and development of various treatments. Some old tricks to be able to get rid of the piles are still used today but there are lots of new techniques. One does not necessarily need undergo a surgery for severe hemorrhoids, too. As a matter of fact, many physicians would recommend as numerous non-surgical procedures as it can be first. One of the most common options is bipolar electrotherapy for hemorrhoid.

Piles - Those Bleeding Painful Veins

Hemorrhoids can occur in the lower rectum or anus. It occurs when the veins and blood vessels cause the tissues to clump and be abnormal. They are painful. They hemorrhage most of the time but even if it doesn't the situation can really become not comfortable.

Many Patients Do Not Look for Treatment

It is not because they do not have the money. Another point is that the treatments are not that expensive. It is mainly because they are shy to be able to admit as well as to have people (even doctors) knowing what they have in those areas.

Treatments Options that Need in Order to be Considered Before Going for Surgery

There are many less painful treatments that you could consider before deciding to go through a surgery. Some of them are the illness coagulation, hemorrhoidolysis, rubber banding and super freezing. In fact, these kinds of care is essentially painfree.

Bipolar Electrotherapy/Coagulation

There are two types of coagulation. The first one is monopolar coagulation. The second is bipolar. The latter is great for mild cases. Most physicians take into account giving it a try before suggesting surgeries.

“ Bipolar electrotherapy for hemorrhoid is also referred to as bipolar diathermy, bipolar coagulation and BICAP coagulation (BICAP stands for bipolar circumactive probe). It is a process that involves coagulation impact directly to the mucous membrane, which are near the affected cells. It is practically a surgical approach but it does not inflict so much pain unlike hemorrhoidectomy along with other surgical procedures.

- With bipolar electrotherapy, the cosmetic surgeons use electrical currents that are concentrated on the mucous membrane.
- The electric current need to be applied in a very short period.
- One to two seconds are ideal.
- The electric current initiates the heating up of the affected tissues.
- The actual proteins in the mucous membrane will also help eliminating the abnormal tissues.

The procedure is actually much like photocoagulation except that there is absolutely no change to the depth that can be treated even in the subsequent sessions. This is why this treatment is just recommended when the hemorrhoid is not at its worst stage. It is best suitable for grade I and II **internal hemorrhoids**. It can be applied to grade II piles but prolapsing tissues are less likely to react.

“

How to treat External Hemorrhoids The worlds over millions of people are known to suffer form hemorrhoids or piles. Fortunately though, there are many treatment methods too that are available for treating the condition. External hemorrhoids are typically found around the opening of...

Hemorrhoids Hemorrhoid Piles Internal Hemorrhoids

- The process is not as effective as other options.
- First, it does not control bleeding.
- Rubberized banding or ligation also appears to be much better in some cases.
- Second, the rate to that the problem will recur is at 25 to 30 percent.
- Addition, studies show that bipolar electrotherapy for hemorrhoid does not come with a lot of complications.
- Only ten percent of the patients who undergo the task develop complications like rectal fissure.
