The Common Symptoms are:

Bleeding: This is usually the primary symptom. At first the bleeding is slight; it is bright red and it takes place throughout defecation, the blood might be seen on the toilet paper or it could form streaks of blood on the feces. This bleeding continues off and on for months or years.

Pain: Pain in the butt area usually accompanies the external type of hemroids, it is present in the inner type only when it has significantly prolapsed out of the anal canal. [Click here](#) if you want to rid yourself of the pain of hemorrhoids quickly.

Itching: *This embarrassing urge to scratch the anus can also be a feature of hemorrhoids.*

Discharge: *Mucus discharge is really a frequent feature of prolapsed protruding hemorrhoids.*

Anaemia: This could be low level of blood in the body caused by persistent profuse bleeding from a hemorrhoid swelling.

- Prolapse: This is protrusion of the hemorrhoid through the anus.
- Initially the protrusion lowers itself, but afterwards it has in order to be replaced manually.
- If left untreated the actual hemorrhoid can be permanently prolapsed.

Sitz Bath For Treating Mild Cases Of Hemorrhoids Hemorrhoids are painful and very itchy lumps that protrudes in your anal opening. It is quite embarrassing, that is why hemorrhoid sufferers are very happy to know that there is one treatment that is very effective and easy to do, even inside your...

Anal swellings: The **external hemorrhoids** occurring outside the anus can present as soft masses around the rectum that are covered with normal skin.

Some dangerous conditions can mirror the symptoms of hemroids, so it is important to get a doctor's diagnosis. These can include colon cancer, polyps, rectal cancer, Crohn's disease and ulcerative colitis which can be inflammatory **bowel** diseases. Anal infections as well as anal tears may be additional disorders in which can cause patients trouble. These diseases can mirror hemorrhoid signs so further assessment is required.
