The Common Symptoms are:

Bleeding: This is usually the primary symptom. At first the bleeding is slight; it is bright red and it takes place throughout defecation, the blood might be seen on the toilet paper or it could form streaks of blood on the feces. This bleeding continues off and on for months or years.

“ Pain: Pain in the butt area usually accompanies the external type of hemroids, it is present in the inner type only when it has significantly prolapsed out of the anal canal. [Click here if you want to rid yourself of the pain of hemorrhoids quickly.](#)”

Itching: This embarrassing urge to scratch the anus can also be a feature of hemorrhoids.

Discharge: Mucus discharge is really a frequent feature of prolapsed protruding hemorrhoids.

Anaemia: This could be low level of blood in the body caused by persistent profuse bleeding from a hemorrhoid swelling.

- Prolapse: This is protrusion of the hemorrhoid through the anus.
- Initially the protrusion lowers itself, but afterwards it has in order to be replaced manually.
- If left untreated the actual hemorrhoid can be permanently prolapsed.

“

Top Five Ways on How to cure Hemorrhoids Hemorrhoid is no laughing matter and finding out how to cure hemorrhoids is a must for every person who suffers from it. A hemorrhoid is essentially a swelling that is seen in the anal area. This can also be said as an inflammation inside or outside...
