

Rubber Band Ligation for Hemorrhoids: Understanding How It Works

Most hemorrhoids patients hate going through surgery. If it can be helped, they would rather not experience going under the knife. Rubber band ligation for hemorrhoid, an outpatient treatment that is recommended for second-degree hemorrhoids cases, is preferred over major surgery as it is less excruciating than any other surgical treatment. The recovery period is also shorter compared to surgery. Pertaining to with regard to this treatment range from 60 to 80 percent.

History

Hippocrates documented back in the year 460 BC something about tying the affected rectal area with a thread. The use of rubber band was pioneered by Blaisdell in 1958. Barron refined the procedure in 1963. Barron made use of a Barron Ligator in his treatment.

Purpose

The purpose of using rubber band ligation for hemorrhoid treatment is to stop/minimize/control the flow of blood to the affected area. That part is expected to wither, die and eventually fall off after a few days - usually two to seven days. In many cases, this falling off happens during bowel movement but it can happen outside the potty.

Why Rubber Band

Threads are usually made of organic materials and for that reason, they could cause bacterial accumulation. This is very dangerous because with this disease, we have been dealing with open wounds.

On the Contrary, Rubber is Not Susceptible to Bacterial Accumulation.

Procedure.

- Another positive aspect of going through this procedure is its brevity.
- It only takes a few minutes to finish the entire process.
- Prior to the ligation procedure, the patient will be taking antibiotics for an average of two weeks.

Positioning - You will be asked to lie down on your left side with your knees together drawn up to expose your buttocks for a good view.

Applying the Band

A device, called a proctoscope, are going to be put into the hole to push most of the affected part on one side. Then forceps will be used to grasp that component to hold on to the base (of the swollen part). Then a rubber band is used in order to enclose the camp.

Complications

Complications of rubber band ligation with regard to hemorrhoid intervention include: anal fissure, thrombosed hemorrhoids, pelvic sepsis, music group breakage or even slippage, hemorrhaging and also pain.

Patients May Experience All or Some of These Complications

Bleeding can be experienced for the days especially right after and during bowel movements. Patients are advised not to take aspirin as well as other medications that contain Ibuprofen. These medications encourage blood loss. If bleeding becomes severe, you need to get in touch with your physician immediately.

Other Things That you might Do to Help Improve Your Condition or Hasten Recuperation

“

How to get rid of Hemorrhoids Hemorrhoids are usually caused when constipation forces you over exert yourself while having a bowel movement. The increased pressure that you put on the sensitive veins of your anal region leads to hemorrhoid swelling, bleeding, itchiness and...

Take Acetaminophen to Lessen Discomfort.
